

1. E-Commerce Website

Draw a use case diagram for an **e-commerce platform**:

- Customers can browse products, add items to cart, and place orders.
- Users must log in or register to make purchases.
- The admin manages product listings and views reports.
- A payment gateway handles transactions.

2. University Examination System

Create a use case diagram for a **university exam management system**:

- Students can register for exams and view their results.
- Lecturers can upload marks and schedule assessments.
- The exam controller can manage exam schedules and monitor result approvals.

3. Vehicle Rental System

Design a use case diagram for a **vehicle rental service**:

- Customers can search vehicles, book rentals, and make payments.
- Admin can add or remove vehicles, manage bookings, and generate reports.
- Staff can inspect and return vehicles to the fleet.

4. Hotel Reservation System

Draw a use case diagram for a **hotel management system**:

- Guests can check room availability, book rooms, and cancel bookings.
- Receptionists handle check-in/check-out.
- The manager can generate occupancy and income reports.
